

# Reports

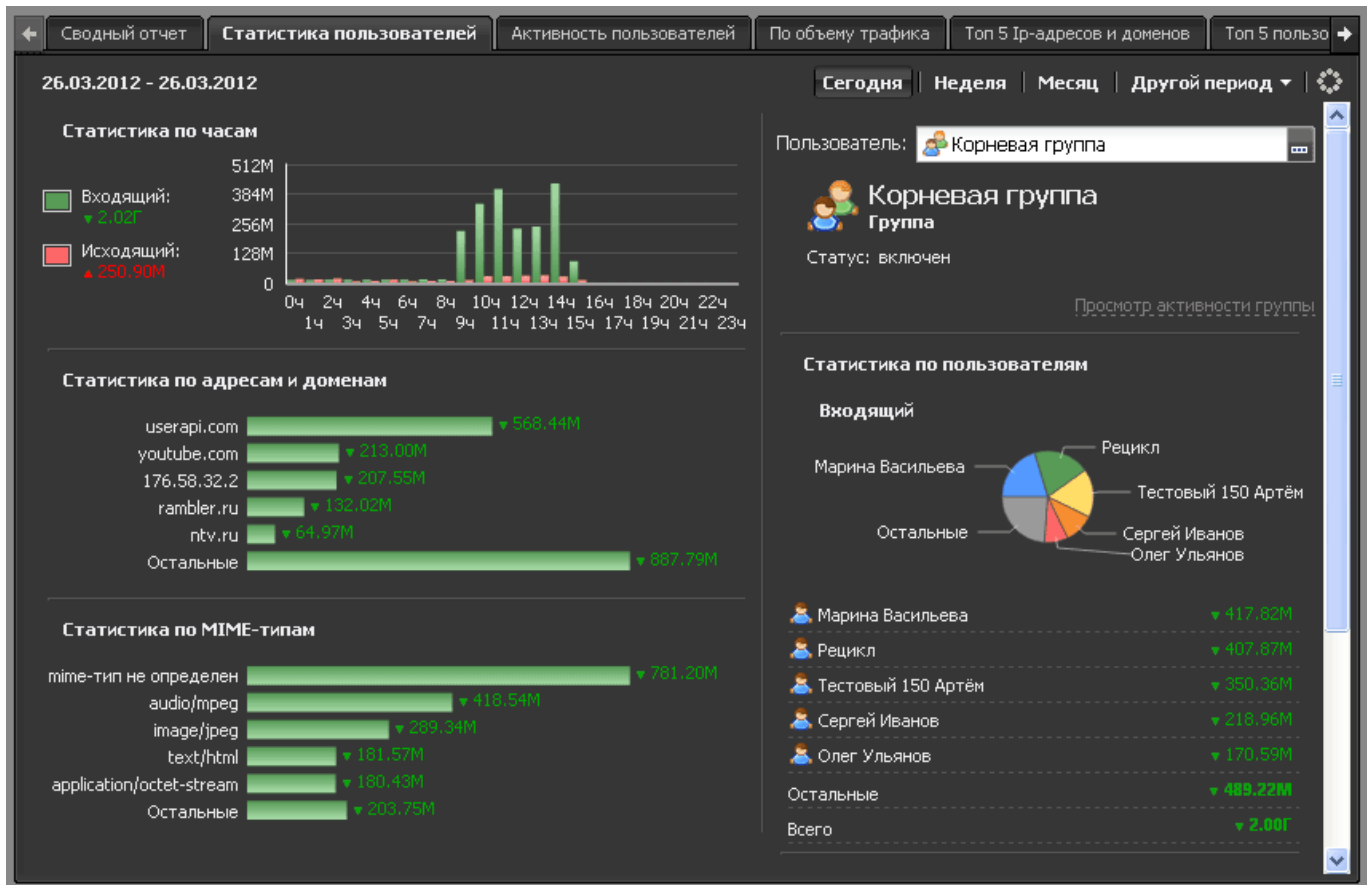

Statistics system of Internet Control Server could be configured manually as well as displayed with several standard reports. All those reside in «Reports» module. Each report is a subsystem of graphs and numerical values which are bound by time frames. Upper right corner contains a time period. All reports are generated for the given time-frame - day, week, month or variably specified. The day is the default setting.

## Consolidated report

Consolidated report allows displaying visually statistics about traffic consumption in the system. By default is consists from several reports: by user, by protocol, by visited sites etc... This page could be edited by changing the location of the reports, diagram view and its settings. You can also add your own reports. All reports are generated for the selected time-frame - day, week, month or arbitrarily specified.

## Users statistics

Contain the following for each user: by hour, address or domain (visited sites) statistics, MIME-types statistics, protocol statistics. In case is user's group is selected the report is substituted with the traffic volume report of all users in the group.

## Users activity

Сводный отчет | Статистика пользователей | **Активность пользователей** | По объему трафика | Топ 5 IP-адресов и доменов | Топ 5 польза

Displays the list of users, grouped by consumed traffic for the given period of time.

## Top 5 ip-addresses and domains

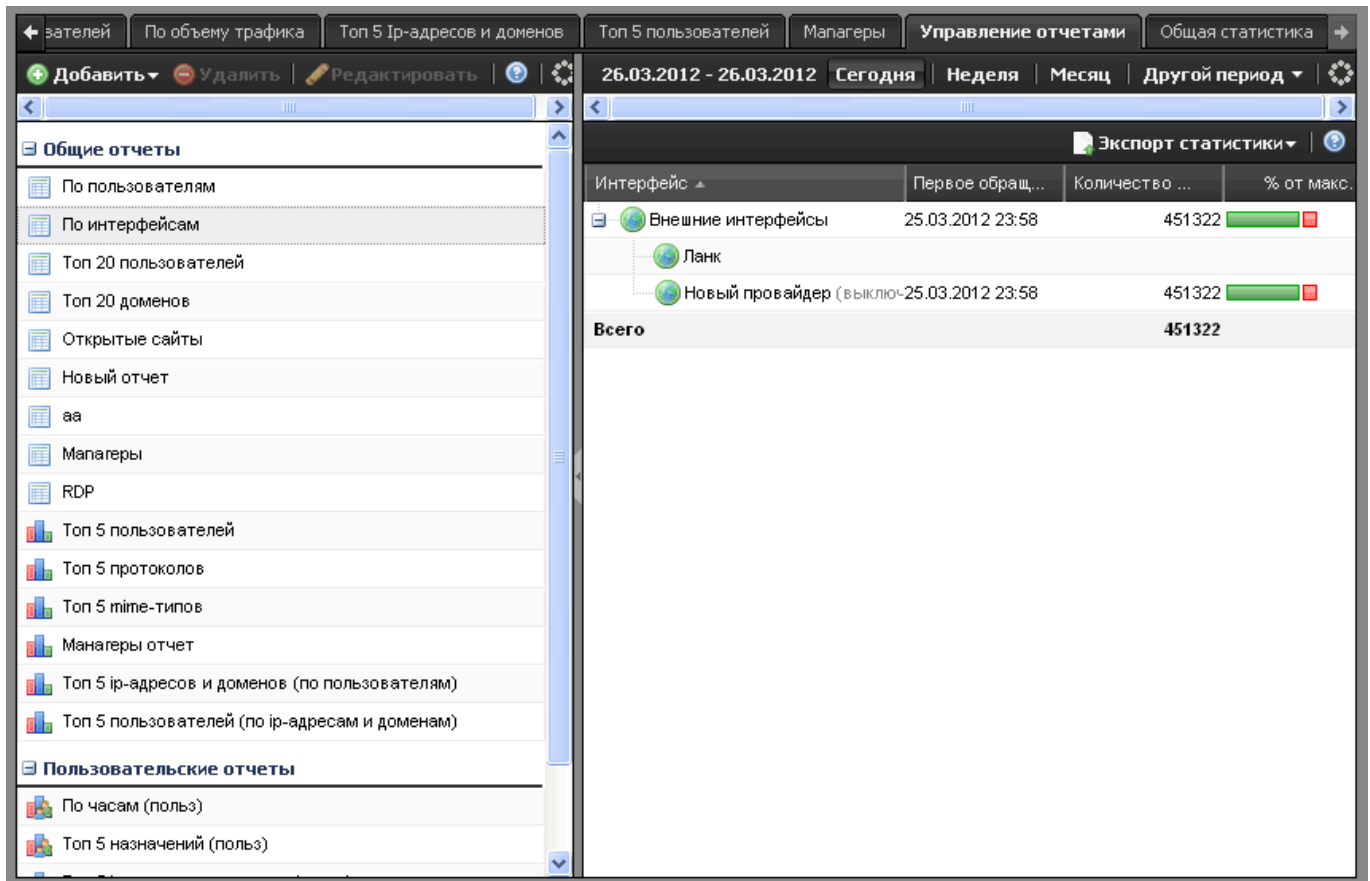

Displays the list of 5 most visited hosts and domains as well as 5 most active users visiting those sites.

## Top 5 users

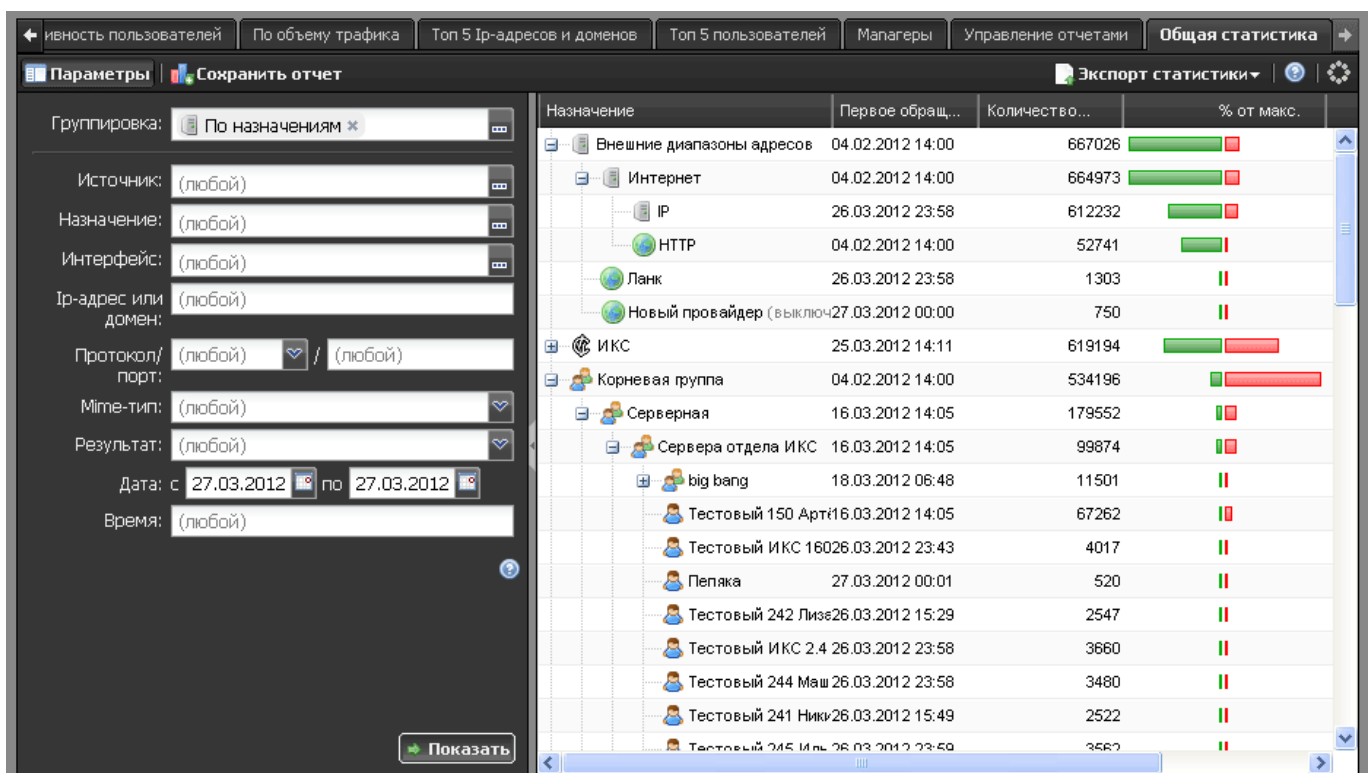

Similar to previous report, but displays a list of most active users and list of top-5 visited domains for each.

## Reports management

Displays a list of all reports - standard and user-defined. You may create several typical reports which are mostly suitable for traffic-control of your organisation and review them at any time.

## Report designer

This tab displays a report designed for the case when standard reports are not enough. The guide review the common principles of work with [Report designer](#).
