

# Roles

This module is defining how much abilities do users have to manage ICS. By default, these roles of users are available:

name	abilities
Administrator	The user has full access to all functions of ICS web-interface
User	The user has access only to his own personal statistics page
Group administrator	The user has access to create, delete and edit users of his group, to apply rules, quotes to its users and to theirs statistics

To create another role, press "Add" - "Role" buttons, specify the name, description, icon type and choose privileges from the list.

After creation of the role in the "Rule sets" module a rule set will be created, fixed strictly to this roles, as it is for rules sets for users and administrators.
