

Reports

You can either set the statistics system in ICS manually, either use some build-in reports. They all can be seen in the “Reports” module. Every report is a complex of graphics and numbers, that are displaying information from any time period. All reports are generated from the information for the chosen period – a day, a week, a month or any other that you specify. By default ICS shows you the numbers of the current day.

In the version 5 was added the opportunity to display statistics, grouped due to the traffic categories.
